

Highlights in Bioorganic Chemistry: Methods and Applications

Edited by: Carsten Schmuck & Helma Wennemers

ISBN: 3-527-30656-0 - Wiley-VCH

Content

PART 1: BIOMOLECULES AND THEIR CONFORMATION.

- 1.1 Equilibria of RNA Secondary Structures (R. Micura & C. Höbartner).
- 1.2 Synthesis and Application of Proline and Pipecolic Acid Derivatives: Tools for Stabilization of Peptide Secondary Structures (W. Maison).
- 1.3 Stabilization of Peptide Microstructures by Coordination of Metal Ions (M. Albrecht).
- 1.4 Conformational Restriction of Sphingolipids (T. Kolter).
- 1.5 β -Amino Acids in Nature (F. von Nussbaum & P. Spiteller).
- 1.6 Biosynthesis of β -Amino Acids (P. Spiteller & F. von Nussbaum).

PART 2: NON-COVALENT INTERMOLECULAR INTERACTIONS.

- 2.1 Carbohydrate Recognition by Artificial Receptors (A. Lützen).
- 2.2 Cyclopeptides as Macrocyclic Host Molecules for Charged Guests (S. Kubik).
- 2.3 Bioorganic Receptors for Amino Acids and Peptides: Combining Rational Design with Combinatorial Chemistry (C. Schmuck, *et al.*).
- 2.4 Artificial Receptors for the Stabilization of β -Sheet Structures (T. Scrader, *et al.*).
- 2.5 Evaluation of the DNA-binding Properties of Cationic Dyes by Absorption and Emission Spectroscopy (H. Ihmels, *et al.*).
- 2.6 Interaction of Nitrogen Monoxide and Peroxynitrite with Hemoglobin and Myoglobin (S. Herold).
- 2.7 Synthetic Approaches to Study Multivalent Carbohydrate–Lectin Interactions (V. Wittmann).

PART 3: STUDIES IN DRUG DEVELOPMENTS.

- 3.1 Building a Bridge Between Chemistry and Biology—Molecular Forceps that Inhibit the Farnesylation of RAS (H. Nestler).
- 3.2 Inhibitors Against Human Mast Cell Tryptase: A Potential Approach to Attack Asthma? (T. Martin).
- 3.3 Preparation of Novel Steroids by Microbiological and Combinatorial Chemistry (C. Huwe, *et al.*).
- 3.4 Enantiomeric Nucleic Acids—Spiegelmers (S. Klussmann).

3.5 Aspartic Proteases Involved in Alzheimer's Disease (B. Schmidt & A. Siegler).

3.6 Novel Polymer and Linker Reagents for the Preparation of Protease-inhibitor Libraries (J. Rademann).

PART 4: STUDIES IN DIAGNOSTIC DEVELOPMENTS.

4.1 Selectivity of DNA Replication (A. Marx, *et al.*).

4.2 Homogeneous DNA Detection (O. Seitz).

4.3 Exploring the Capabilities of Nucleic Acid Polymerases by Use of Directed Evolution (S. Brakmann & M. Schlicke).

4.4 Labeling of Fusion Proteins with Small Molecules. *in vitro* (S. Gendreizig, *et al.*).

4.5 Oxidative Splitting of Pyrimidine Cyclobutane Dimers (U. Wille).

4.6 Charge Transfer in DNA (H. Wagenknecht).

PART 5: CATALYSIS.

5.1 Protease-catalyzed Formation of C–N Bonds (F. Bordusa).

5.2 Twin Ribozymes (S. Müller, *et al.*).

5.3 RNA as a Catalysts: The Diels—Alderase Ribozyme (S. Keiper, *et al.*).

5.4 Combinatorial Methods for the Discovery of Catalysts (H. Wennemers).

PART 6: METHODOLOGY, BIOENGINEERING AND BIOINSPIRED ASSEMBLIES.

6.1 Linkers for Solid-phase Synthesis (K. Knepper, *et al.*).

6.2 Small Molecule Arrays (R. Breinbauer, *et al.*).

6.3 Biotechnological Production of d-Pantothenic Acid and its Precursor d-Pantolactone (M. Kessler).

6.4 Microbially Produced Functionalized Cyclohexadiene-trans-diols as a New Class of Chiral Building Block in Organic Synthesis: On the Way to Green and Combinatorial Chemistry (V. Lorbach, *et al.*).

6.5 Artificial Molecular Rotary Motors Based on Rotaxanes (T. Felder & C. Schalley).

6.6 Chemical Approaches for the Preparation of Biologically-inspired Supramolecular Architectures and Advanced Polymeric Materials (H. Klok).
